## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 4, and 5 are rejected under 35 U.S.C. 102(e) as being anticipated by Jones, Jr.

As per claim 1, Jones, Jr. discloses an apparatus comprising a processor core 12, thermal sensor 84, power sensor 86, and a power management unit (76, 80, 82) that controls the processor based on a thermal power threshold and a electrical power threshold different from the temperature power threshold (column 4, lines 21-62).

As per claim 4, Jones, Jr. discloses throttling the processor (i.e., moving to a lower heat generating/power consuming configuration).

As per claim 5, Jones, Jr. discloses increasing the processor after the threshold has been reached (column 4, lines 42-45).

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3744

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 2 and 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jones, Jr.

As per claims 2 and 3, these are simply alternative scenarios wherein one or the other threshold is higher. While Jones, Jr. does not specifically state which of the thresholds is higher, since they are different, clearly one is higher than the other. Further, which one is higher is simply a function within a specific application of how the heat requirements relate to the power requirements, and the specific threshold settings are obvious matters of design choice based on the various operating parameters for the purpose preventing overheating and minimizing power usage.

#### ***Allowable Subject Matter***

Claims 6-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 9-25 are allowed.
